

## StatCrunch Web Site

There is a web site you can go if you just want to use the StatCrunch feature of MyMathLab. You don't have to log into the whole Course Compass routine to get to StatCrunch, and the site has features where you can copy/paste to WORD all of the things you generate, as well as it has a place where you can save your original data file and any output you have created. You need only to login using your MyMathLab login and password. The site is

<http://statcrunch.com>

and the home page looks like that shown below.

### Welcome to StatCrunchU!

StatCrunch University (StatCrunchU) is a large ficti students. The tools on this page allow you to adm StatCrunchU students. Use your statistics skills to share any interesting insights with the **StatCrunch** in mind that it is very unlikely that any two sample somewhat from user to user.

Again, the StatCrunch ID is your MyMathlab login. When you get time, try out this site—I use it all the time for just doing the StatCrunch features, and have a place to save my files online at this same site.
