ZDM – The International Journal on Mathematics Education

Formerly: Zentralblatt für Didaktik der Mathematik

ZDM is one of the oldest mathematics education research journals. The papers appearing in the six themed issues per year are strictly by invitation only followed by internal review by selected members from the editorial board and external review by invited experts. The journal exists to survey, discuss and extend current research-based and theoretical perspectives as well as to create a forum for critical analyses of issues within mathematics education. The audience is pre-dominantly mathematics education researchers around the world interested in current developments in the field.
